Dear Sir/Madam

I'm currently employed at Ericsson in Kista as a Software Developer and Team Leader. I develop drivers for the radio hardware units used in the Radio Base Station 6000 series. In order to first boot and bring up the radio hardware, the different drivers for the many components on the board needs to be working and configured correctly. This is done by either creating the drivers from scratch using the components datasheet and the boards circuit diagram or simply by adapting and reusing existing drivers. In most cases we emulate the hardware first and write the drivers before the physical boards arrive from the factory to save time and money.

My career started at SAAB Combitech as a consultant for Ericsson, where I developed a test framework in Perl which is used to run automated test cases. The test cases was written in Tcl/Expect but the framework can also execute test cases in Perl or bash and also support NetConf. The test framework became a separate product and is now used to test different Linux embedded operating systems by all Ericsson products at the department. I continued in the same department but as a designer where I began to develop Linux kernel patches and pushed upstreams to Linus Torvalds.

During my research at the University of Toronto, I became extremely interested in operations research, optimization and solving NP-hard combinatorial problems with the help of distributed algorithms. The result of my experience working abroad together with a PhD student ended in a published paper. The whole experience abroad gave me new friends for life, deepened my analytical thinking and broaden my knowledge in research and software development.

As one of the former committee member in LUDD, the computer society in the university, I'm good at organizing meetings and social activities. Serving for the Swedish marine strengthen my ability to work in a team, become more structural with a high degree of responsibility in a stressful environment.

My friends and co workers think of me as an outgoing, yet calm, kindhearted and responsible person with great will power.

For your convenience, I have attached this letter and my CV. Thank you for your consideration. I look forward to hearing from you.

Yours Sincerely,

A handwritten signature in dark blue ink that reads "Samuel Gabrielsson". The script is cursive and fluid, with the first name "Samuel" and last name "Gabrielsson" clearly distinguishable.
